5200	66	166	266	366	466	566	666	766	866	966	1066	1166	1266	1366	1466	

Calculated EIRP

The maximum measured transmitter power is the following:

Frequency [GHz]	Conducted Output Power Pout [dBm]	Conducted Output Power Pout [mW]	Maximum Antenna Gain [dBi]	P _{out} EIRP [dBm]	P _{out} EIRP [mW]
2.402	-2.33	0.58479008	3.19	0.86	1.22

Note:

Per the equation in section 1.3.1 of FCC Document # 412172 D01 Determining ERP and EIRP v01;

 $EIRP = p_t x g_t$

where:

p_t = transmitter output power in watts

g_t = Numeric gain of transmitting antenna (unitless)

Evaluation for FCC

According to FCC KDB # 447498 D01 V06, Clause 4.3.1

(a) For 100MHz to 6 GHz and test separation distances \leqslant 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following:

 $\frac{\text{(max. power of channel, including tune - up tolerance, mW)}}{\text{(min. test separation distance, mm)}} \times \sqrt{f(GHz)}$

 \leq 3.0, for 1-g SAR, and \leq 7.5, for 10-g extremity SAR

So, the max allowed power for 1-g SAR with distance 5mm is 9.68mW And the max allowed power for 10-g extremity SAR with distance 5mm is 24.20mW

Products

Prüfbericht - Nr.: Test Report No.	50046619 001	Seite 3 von 3 Page 3 of 3
Conclusion		
The max EIRP of the devi 10-g SAR test exclusion t So, SAR data is not requi	ice is 1.22mW, which is totally lower than the 1-g and hresholds. red for FCC.
